A IMPLEMENTATION AND DOCUMENT UPDATE

A.1 Appointment of the document controller of the "Pipeline Construction Contingency Plan Phase 1"

APPOINTMENT OF THE CONTROLLER OF THE CONTINGENCY PLAN

The current has the purpose of naming LUIS CAVERO PASCO, HEALTH AND SAFETY ADVISOR, as controller of the Pipeline Construction Contingency Plan Phase 1, for Light Vehicles, on the route Lima – Pisco – Ayacucho.

The controller of this document is responsible to document, communicate and distribute controlled copies of the current Plan to holders, any change and/or revision that is made to the current document.

Changes will be recorded and distributed in the CHANGE REGISTRY SHEET form. Therefore registry sheets generated by any member of the organization, to improve the scopes, objectives, procedures or any date of this document, must be addresses to the Contingency Plan controller.

Bárbara Bruce
General Manager
PERU LNG

A.2 Distribution list of the Spanish version

A.4 Procedure to update the document

The revision and/or update of the current Plan must be done under the following conditions:

- Variation in the extension of the scopes, purposes or objectives of the Pipeline Construction Contingency Plan Phase 1, for Light Vehicles .
- Modification in the transportation characteristics that involve changes in the vehicle type (different to Light vehicle), increase or variation of the route, as well as modifications in the operations (personnel transportation, construction materials, etc.).
- Results indicated by the post-emergency analysis (levels II and III). This analysis must be done together with Incident Command members and the Document Controller; optionally with the contractors involved.
- Modification in the existing response communication chart, implementation or substantial changes in internal resources available in the plant, (future), increase or decrease of the available resources on the route (own resources or of third parties).
- At least within a period of time of no more than 12 months of the last Plan revision or complete update of the Plan.

In case of proposing the modification of any text, data or section of the current document, the Document Controller must record and support the modification in the REGISTRY CHANGES SHEET, **Attachment A**.

The Document Controller must analyze this uphold and present it in the companies monthly safety meeting before modifying and submitting any changes to the all interested (authorities, staff members, personnel and contractors).

The distribution of the changes (due to revisions and/or updates) must be performed through the Annual Training Program, inductions, 5 minutes talks, official presentation to the authorities or any other mean to ensure all Incident Command Members become aware of the latest update/version.

NOTE: Workers, directly or indirectly hired by the PERU LNG, including those belonging to Contractors will be considered personnel.

B GENERAL INTEREST AND PLAN CONTENT

B.1 Introduction

PERU LNG S.R.L. ("PERU LNG") is a company dedicated to hydrocarbons activities, currently developing an export project of Liquefied Natural Gas (LNG) from its plant under construction located in Pampa Melchorita, located at Km. 169 of the South Pan-American Highway.

"Compañía Operadora de LNG del Perú SAC" ("COLP"), company constituted in accordance with Peruvian laws, has been designated as PERU LNG S.R.L. operator, to perform all necessary activities to execute the Investment Agreement to install, operate and maintain the Natural Gas plant operations; agreement subscribed between PERU LNG and the Peruvian Government.

The LNG receipted in the plant site will be transported from the Camisea Fields. The construction of PERU LNG's main pipeline will start in 2007; this will require the transportation of personnel, supplies, construction materials, fuel and all types of machineries.

The Contingency Plan covers the first phase of the pipeline project, which considers mainly personnel transportation through light vehicles (4x4 trucks) traveling across the route Lima – Pisco – Ayacucho.

For this reason PERU LNG has developed the current Contingency Plan to guide, define, and coordinate adequate response actions; establish an organizational structure during emergencies; and develop specific procedures in accordance with the corresponding risk analysis applicable to the route and driving conditions expected.

PERU LNG is responsible for implementing, updating and distributing the current document to all personnel (including contractor and subcontractor) to ensure they cover the following actions:

- Prevention: Recommend personnel in charge of light vehicles to fill in the inspection forms, verify the route sheets, the vehicle's equipment, and to keep a defensive driving attitude.
- Response: Establish emergency procedures according to risk analysis, determine impact levels and the use of all available resources that can be found along the route to control and mitigate emergencies.
- Coordination: Implement and maintain a secure and reliable communication system to ensure the incident is promptly reported, the Contingency Plan is activated, and the Emergency Response (personnel, external support, resources, etc.) is requested and supplied effectively.

The current Plan has been approved by PERU LNG General Management and it shall be implemented and fulfilled by all functional, personnel and contractors involved in with PERU LNG project.

B.2 List of principal routes

Within the current Plan a series of routes will be mentioned, as well as highway stretches/paths which are part of the route Lima – Pisco – Ayacucho, reason why the current plan has been developed and for which we detail the following:

- **ROUTE STRETCH : Lima – Pisco – Ica**
- NAME OF THE ROUTE : South Pan-American Highway
- ROUTE DISTANCE : 300.0 Km.
- ROUTE CONDITION : Asphalted Highway / Excellent Conditions.

- **ROUTE STRETCH : San Clemente - Huaytará - Huamanga**
- NAME OF THE ROUTE : Libertadores Wari Highway
- ROUTE DISTANCE : 330.0 Km.
- ROUTE CONDITION : Asphalted Highway / Excellent Conditions.

- **ROUTE STRETCH : Huamanga – San Miguel – PS 3**
- NAME OF THE ROUTE : Local penetration Highway
- ROUTE DISTANCE : 170.0 Km.
- ROUTE CONDITION : Asphalted Highway / trail / compacted / From Huamanga to Quinua = Good Conditions. From Quinua to PS 3 = Regular Conditions

- **ROUTE STRETCH : Detour Sta. Cruz – Puerto San Martin**
- NAME OF THE ROUTE : Local Highway of penetration
- ROUTE DISTANCE : 30.0 Km.
- ROUTE CONDITION : Asphalted Highway / Regular Conditions

B.3 PERU LNG Facilities

In case of an emergency, during personnel transportation with light vehicles along the route Lima – Pisco – Ayacucho, PERU LNG personnel and contractors are responsible for responding and providing support from their facilities.

PERU LNG facilities are listed below:

- **NAME : Main office in Lima**
- LOCATION : Av. Víctor Andrés Belaunde 147, Real Way 185, Real Tower 12, Floor 2, San Isidro - Lima
- OCCUPANT'S TYPE : Staff members, managers, executives, technicians, administrative personnel, drivers and cleaning personnel.
- APROX. VOL. OF OCCUPANTS : 262 people

- **NAME : Pampa Melchorita Natural Gas Liquefaction Plant**

- LOCATION : Pampa de Melchorita, South Pan-American Highway Km. 169,
- OCCUPANT'S TYPE : Managers, Supervisors, Technicians, Operators, drivers, cleaning personnel.
- APROX. VOL. OF OCCUPANTS : 827 people

- **NAME : Administrative Office in Ayacucho**
- LOCATION : Manzana N Lote 17, Urbanización Jardín
- OCCUPANT'S TYPE : Community Relations Employees (Engineers, Archeologists, Lawyers, Anthropologists, Agronomists, and Biologists), Manager, drivers and cleaning personnel, and contractor personnel.
- APROX. VOL. OF OCCUPANTS : 26 people

- **NAME : Administrative Office in Cañete**
- LOCATION : Jr. Grau 329 San Vicente de Cañete - Cañete
- OCCUPANT'S TYPE : Communicator and cleaning personnel
- APROX. VOL. OF OCCUPANT'S : 02 people

- **NAME : Administrative office in Chincha**
- LOCATION : Pedro Moreno 114, Chincha Alta - Chincha
- OCCUPANT'S TYPE : Communicators, Community Relations employees, (Agricultural Eng., Veterinarian, Sociologist), light truck drivers of Light vehicles and cleaning personnel.
- APROX. VOL. OF OCCUPANTS : 13 people (2 in office and 11 in the field)

B.4 Purpose

The purpose of the current Plan is to outline the strategy, actions and all the necessary resources to provide adequate response to emergencies involving light vehicles along the route Lima – Pisco – Ayacucho; protect all occupants' health and integrity; care for the company's image; maintain our good relations with the communities and fulfill the authorities requests.

B.5 Objectives

All efforts will be focused on victims (PERU LNG, contractors or third parties) over other important elements that must not be discarded, such as the company's actives, the good corporative image, the environment, the social responsibility and the fulfillment of the national legislation.

The following specific objectives will be established on the coming chapters:

- Classification of different types of possible emergencies that could occur in the route Lima – Pisco - Ayacucho.
- Notification Protocol (internal and external) and the quality of the information required from the emergency scene.
- Emergency response structure and functions of members.
- Emergency response procedures for the different types of possible scenarios.
- The necessary actions to implement, update, qualify and spread the current document.

B.6 Scopes

The current Contingency Plan was written to be activated and to attend any incident associated with the Light vehicles that travel the route Lima – Pisco – Ayacucho, as part of construction project activities associated with the liquefaction plant, the pipeline construction or any other work of PERU LNG.

The actions of response support and help apply to the personnel of PERU LNG and contractors and subcontractor, including any visitors or third parties affected by the incident.

In case of witnessing or arriving to the scene of an emergency of third parties (without commitment of PERU LNG personnel) will support in the basic actions of first aids or medical support, fire extinction and/or request of external support, as far as possible of the technical possibilities, available resources allow it, and only when it does not put in danger the personnel safety. Moreover, will report to the Control Center of PERU LNG, and if possible to the closest National Police of Perú department.

B.7 Limitations

The following scenarios have not been considered for activation of the current Contingency Plan, however these cases will be informed to the Control Center and/or Crisis Support Group as soon as possible:

- Emergencies with different vehicles to those categorized as lights.
- Emergencies in different routes to the ones considered in the current document.

Note: Considering that the current document is restricted to emergencies in the transport by the public via (outside the limits of PERU LNG property) where is a function of the Government Authorities to prepare and train the first response institutions (external support) for the control of incidents and considering that PERU LNG does NOT count with the necessary authority to force the evacuation (take out people of a public or private areas) from a particular sector or area in the route (in case it is necessary or indispensable), as happens inside their facilities, it is clear that the success of it will depend on:

- The will of the person evacuating to fulfill the instructions generated by PERU LNG.
- The capacity in personnel and equipment of the Authorities and/or external support (PNP, PNP, CGBVP, INDECI) to order the evacuation, as well as the obedience degree of the people required to evacuate.
- The support degree that the Municipal Authority must provide and the existence of an organized, equipped and trained office with Civil Defense (Law Nº 19338).

B.8 Description of the Light Vehicles System

The personnel transport using Light vehicles will be done according to the following conditions and parameters:

- Previous coordination of the personnel that will do the route trip.
- Definition by PERU LNG for the vehicle and assigned driver to the required service.
- Definition of the movement of each vehicle, indicating general data of the crew, specifications of the trip and stops (rest stops), detail of the transported equipment or loads, explication of the works to be done in the route, cell/satellite phone numbers of each member of the crew and driver. The format of ROUTE SHEET FOR LIGHT VEHICLES is joined in the **Attachment C**.
- Report of the trip to the Control Center of PERU LNG; verbal or printed format, with the objective of movement monitoring, from the departure of the vehicle until its arrival.

With the purpose of maintaining an adequate safety level in the light vehicles transport operations, the driver and the crew will necessary maintain the following behaviors and previous verifications to each trip.

- Review the basic safety equipment that each light vehicle must always have operative. The detail of this equipment is indicated in the Attachment D as LIST OF BASIC SAFETY EQUIPMENT.
- Knowledge of the orders about valid safe driving for drivers as for the crew, detailed in the **Attachment J** as SAFE DRIVER CODE AND PASSENGER CODE.
- Review and prove the available communication systems.
- Review the route (weather, landslides, demonstrations, etc).

B.9 Definitions

With the purpose of achieving an adequate interpretation of the several sections contained in the current Contingency Plan for Light Vehicles, please see **Attachment B** the main terms and acronyms used in this document.

C TYPE AND LEVELS OF EMERGENCIES

C.1 Introduction

During the transport operations of Light vehicles, in the route Lima – Pisco – Ayacucho it has been identified many risks, which can be occasioned by:

- Physic conditions of the route (height, curves, and slopes).
- Weather conditions and consequences caused by sudden changes.
- Risks resulting by the presence of populates, cities, agricultural zones and cattle crossbreed.
- Existence of fluid transit of third parties vehicles that not necessarily carried out with an optimum safety standard, in their driving as in the technical conditions of their vehicles.
- Possibility of occurrence of natural phenomenon or geo-dynamic events (earthquakes, landslides, rock falls, slips, etc.).
- Existence of bridges, tunnels, water flows and fords.
- The human factor as turning point of attitudes and unsafe actions that can originate incidents.

These risks could generate several types and levels of emergencies that the current Plan had identified, based on the risk analysis (separated document), on the experience collected during the route trip and on statistics published by the MTC.

The emergencies that involves people, vehicles and minor equipment of the company, could be solved with several types of resources, in some occasions they could be controlled in a short time (hours) and in other case they could take more time and require mobilization of resources, motive by which it is adequate to classify the emergencies on different levels.

EVENTS THAT COULD GENERATE EMERGENCIES

Incidents □ Vehicles fires □ Vehicles incidents □ Roll over □ Leave the highway □ Run over □ Multiple injured people □ Adjacent forest fires □ Fuel spills	Natural Phenomenon □ Earthquakes □ Snowfall/ frost/ hailstorm □ Landslides / rock falls □ Floods □ Torrential rains □ Fog □ Electrical storms	Political/ Labors □ Strikes/ Blockades □ Vandalism □ Civil Commotion □ Sabotage □ Terrorism □ Robbery or assault
Communications □ Press problems □ Problems with non governmental Organizations (NGO) □ Problems with local authorities □ Problems with the population	Problems on the route □ Emergency transit situation (PNP) □ Fall to lands of high voltage power lines □ Fall of a bridge □ Escape of the water course □ Stretch in repair, fall of a publicity panel.	Others □ Incidents in communities □ Sickness of the driver or the crew (soroche or others) □ Mechanical damages

Note:

For the critical cases not shown in this chapter, it must considered the criteria from PERU LNG Incident Commander, following the company policy, its safety guidelines and spirit to preserve the human life and maintain the relations with the communities over any other priority.

C.2 Classification of the Emergency levels

The summary of the response levels establishes the guidelines to define the situations or emergency levels.

There are many factors that had been considered in the determination of the emergency level, such as:

- The extension of the affected area.
- The potential impact over the workers, third parties and over the property.
- The volume of resources used for the response.

C.2.1 Situation of Minimum Alert

Not all incidents must be treated as an emergency. There is a “Situation of Minimum Alert” with the following characteristics:

1. Risk control is immediate and is obtained only with the resources in “that moment” and “place”.
2. Control systems functioning normally.
3. The impact to third parties and to personnel safety is applied only to the “place”.

4. Public safety is not threatened.
5. Environmental impact is confined to the “place”.

C.2.2 Level One – Potential Emergency

a) The immediate control of the danger becomes progressively more complex due to the deterioration of the established conditions for the transport from a situation of minimum alert.

b) Control and relief systems functionining correctly.

c) Impact to the public safety and to the workers, as well to the environment are confined to the place, without possibility of impact to the outside.

d) The nature of the situation can be defined as a short term or brief duration.

e) The situation can be managed completely with the resources available in the place and by the personnel in the “place”.

C.2.3 Level 2 - Emergency

- It is possible a partial control of the hazard.
- The nature of the situation can be defined as a short term.
- Some control and relief systems do not work correctly or are not operative.
- There exists the possibility to impact the safety and integrity of third parties and workers; however the danger is still confined in the place of the occurrence and has a potential impact over the outside.
- There is an impact to the environment in the work place that reaches the outside.
- The governmental dependencies must be alerted.
- External support is required to control the situation.

C.2.4 Level 3 – Major Emergency

- It is not possible an immediate control of the hazard.
- Control and relief systems are non functional.
- Potential hazard to the personnel and public safety is high.
- There is a potential impact to the environment of long duration.
- External support is required to control the situation.

C.2.5 Fatality

All situation that end with one or more fatalities, will required an specific response and proper documentation. A person’s death as result of an activity that takes place in the construction phase of the Pipeline will imply an action that corresponds to the Level 3 of emergencies.

C.3 Criteria for the Classification of the Emergency Levels

EMERGENCY LEVELS

Attention (Situation of minimum alert)	Minor incident without direct consequences that caused losses, impact to the public safety or environment. Injured people are not generated. Unusual condition that potentially could have generate an incident in case any corrective action had been implemented on time. The vehicle personnel are in capacity of controlling the incident. The condition must be registered to maintain a statistic that is analyzed subsequently.
Slight Level I	Incident with high potential of occurrence. Applicable also to an emergency that can be locally controlled by the personnel of the implied vehicle. It can be generated a minor injured person or minor and short affectation of the environment or public safety. It is not necessary to mobilize resources, but immediate notifications to the Control Center of PERU LNG are made. The responsible person in the scene describes the conditions, pre-classifies the emergency type and defines the response actions. It must be written a report subsequent to the Safety Area.
Moderate Level II	The emergency can not be totally controlled by the personnel of the implied vehicle. It is necessary the presence of additional resources and/ or external support. There are not fatalities but many several injured persons can be generated. The Control Center of PERU LNG activates a Contingency Plan and the Notification Flowchart. The impact to the public safety and to the environment is moderated. The responsible person in the scene coordinates the own and external resources to control the emergency. It is necessary to ask for assistance of functionaries of PERU LNG and authorities. It must be considered the concepts of Press Management. The communication with the Control Center must be constant.
High Level III	Emergency that is of great magnitude or severity. Involves third parties, affects substantially to the public safety, the environment and to the company's image. It is generated al least one serious injured person, unconscious and/ or trapped. It is required the total activation of the Contingency Plan and of the Command Center. It is necessary the presence, in the scene, of functionaries of PERU LNG, specialized personnel and equipment, external support and authorities. The Incident Commander of PERU LNG is in charge of the emergency's management.
FATALITY	Any event where it is generated a fatality as consequence of the emergency. The described procedures for the level III are applied.

With the purpose of assuring an adequate classification of an emergency level on the route and avoiding discrepancies by the possible lack of impartiality, experience and physical conditions to define the different scenarios that could affect the magnitude of an emergency, it is necessary to consider the following:

1. The responsible person in the scene does an initial PRE-CLASSIFICATION of the emergency according to the weather conditions, damages severity, amount of injured people, available and necessary resources, affectation to third parties and exposition to other risks. In case of not being able to pre-classifies the event, it will be necessary that he/she describes the scenario to the Control Center with as much as detail as possible. See point D1.2
2. The Control Center receives this pre-classification and/or description of the scenario. In case of an incident of level “Attention” and/or an Emergency “Level I Slight” the Operator communicates the event to the Supervisor designated by PERU LNG. In case of an Emergency Level II or Level III Fatality, or in case of doubt, the notification flowchart is followed, being the Incident Commander the only one that can VALIDATE an Emergency Level II and III, according the received information.
3. In cases where a functionary is assigned and approaches to the scene to direct the event, this person could carry out a RE-CLASSIFICATION of the emergency according the new observed conditions.

With the aim to determine the applications of the possible emergency levels that could occur on the route, it see **Attachment K**, many examples of EMERGENCY LEVELS CLASSIFICATION occasioned by incidents, natural phenomenon and political labor events.

D RESPOND OPERATIONS

D.1 Communication System

The communication system of the Contingency Plan for light vehicles is based on maintaining operative as a reception instrument for the information from an emergency and coordinates the available resources and the personnel necessary to control the situation.

For this purpose PERU LNG maintains valid notification procedures, a Communication Center located in the Main Office in Lima, and a flowchart of internal and external communications that all the members of the organization must know.

D.1.1 Communication Center in Lima

The Communication Center is an office located in the Main Office of COLP S.A.C. in Lima that will remain attended 24 hours, 365 days per year, with at least one trained person to support the Incident Commander on the scene. This Communication Center will start operating from 1 April 2007.

The Operator of the Communication Center must become the main support for the Incident Commander as for the scene responsible person in the scene. (Scene Commander). This person will maintain a constant communication flow between the emergency scene and the Command Center.

The Communication Center must be equipped with documents, accessories and easiness to guarantee the communication and vital information transmission for the event control.

COMMUNICATION CENTER TELEPHONES:

707 2122
707 2123
707 2124

D.1.2 Internal Notification Procedure (from the scene to Lima)

The purpose is to establish the correct way of notifying an emergency from the scene to the Communication Center and/or any external support organism that is required and is available.

For that there is a format that Communication Center Operator will use to collect necessary information to classify the emergency level, request the resources according to the event's magnitude and notify to the PERU LNG functionaries in an exact and truthful way.

It is obligation of the informant (driver, passengers or vehicle responsible) to access to any communication media (satellite telephone, cell phone, radio, telephones on the route, etc) to notify the Communication Center about the incident.

According to the presented scenario, it is acceptable to generate an initial first notification and subsequent complementary communications, especially in cases where the detailed information or the informant obligation are directly connected to the emergency response.

The initial information for these cases must offer at least 4 basic and essential data:

	BASIC DATA IN THE INITIAL NOTIFICATION
01	WHO REPORTS THE EMERGENCY?
02	PLACE WHERE THE EMERGENCY IS LOCATED? (Route, Km., closest city)
03	EMERGENCY CLASSIFICATION? (Eg. Vehicle roll over - level III)
04	PRESENCE OF PEOPLE INJURED SERIOUS/FATALLY?

The format of internal notification that will make simpler to obtain the information at the scene, generating questions, see **Attachment O.**

D.1.3 Procedure of External Notification (to the external support)

See **Attachment P**, the format for the Communication Center Operator to know how to inform the event to the PERU LNG functionaries as to the external support institutions.

D.1.4 Notification Flowchart

D.2 Response Organization

The organization chart of the Emergency Response on the route Lima – Pisco – Ayacucho is based on a similar structure to the one stated for the construction phase of the Liquefaction Plant of Natural Gas in Melchorita. This structure has 3 main components:

1. PERU LNG personnel
2. Contractor's personnel
3. Local and regional Authorities

Every time that the personnel and contractors are in a modification process (increasing to the extent the Project advances) and that the application field of this organization covers a meaningful distance, the assignation of some of the organization chart positions will depend of the availability of the closest personnel to the event. The Incident Commander will define these assignations.

Insofar that people is available (of the company or contractors) and according to the type and proportion of the emergency to FACE up to, the organization chart Chiefs must assign several persons to cover the responsibilities and remaining positions of the structure.

The general concept of the emergency Organization is based on:

1. The immediate and efficient first response of the personnel (driver and crew) of the vehicle involved.
2. The efficient and timely secondary support of the contractors and/or company personnel, that is on route, and
3. The total complementary support (logistic, press, medical, legal, etc) from the Lima offices or other locations on route.

The link between these components will be the communication maintained through the Communication Center.

The structure of the organization chart of the response team that supports this Plan see **Attachment Q**.

In case it is generated an Emergency Level II or III, the main functionaries of PERU LNG denominated "Crisis Support Group" could be communicated and gathered in a pre-established location in the Lima offices as "Command Center".

D.2.1 Crisis Support Group

It constitutes a group of maximum level functionaries of PERU LNG that will have the responsibility of administrating and generating the strategy to follow in an Emergency Level II or III.

For purposes of the initial notification the group will be activated and informed by the Communication Center according to the flow of the notifications detailed in the point D1.4

It is responsibility of this group to approach to the Command Center in the case of a Level III Emergency or in the case that the Scene Commander requires its presence.

The general information for the contact of these group see **Attachment S**.

D.2.2 Command Center

The Command Center constitutes a physical space located in the COLP SAC. Offices (Av. Víctor Andrés Belaunde 147, Real Way 185, Real Tower 12- floor 2, San Isidro), normally used as Meetings Room, prepared and set out to be activated as neuralgia center of coordination in the case of an Emergency Level II or III on the route.

This space will be equipped with all the easiness and accessories that allow the functionaries of PERU LNG to administrate the emergency. See **Attachment R** for detailed requirements of this location.

The responsible person of maintaining operative the Command Center is the Controller of the Contingency Plan, however for purposes of implementation the Meeting Room, in case there is an emergency, has been disposed the following personnel:

SCHEDULES	RESPONSIBLE PERSON	ALTERNATE PERSON
M – F Office Hours	Reception secretary	Operator of the Communication Center.
Saturdays/Sundays/Holidays	Operator of the Communication Center.	------
M – F Outside office hours	Operator of the Communication Center.	-------

The command centers may change depending on the location, the purpose, the manager and the activities to be developed. From these places it is done the control and/or support for the emergency response. These Command Centers are the followings:

Center	Location	Purpose	Key Activities
On Scene Command Post	Closest location to the event (the On-Scene Commander is located here)	Control of everything related to the event in the location except the public safety.	Control and restraint. Guarantees the personnel safety in the “place”. Define the emergency planning zones. Establish block outs and perimeters in planning zones.
Emergency Operations Center	Local office in the site, base or closest camp.	Provides support to the On-Scene Command Post. Controls initial communication activities and evacuations.	Provides logistic support to the Scene Commander and to the Public Safety Coordinator. Link with the governmental authorities, if necessary: police, judicial branch of the government, public or health ministry.
Incident Command Center	Lima Offices (where the Support Group is placed)	Assistance and direction to the Scene Commander. Integral assistance and direction to the Response personnel.	Provides integral assistance to the public safety. Coordinates technical support to the personnel in the field. Coordinates communications with the public and the government.

D.3 Functions & Responsibilities of the Organization Components.

In this section are described the main duties of the emergencies organization members of this document.

The components of the organization chart can play in two different scenarios, but complementary between them:

1. The components of the Crisis Support Group - The personnel who belongs to this group will be located in the Incident Command Center.
2. The components of the Response Group in the Field.

D.3.1 PERU LNG Incident Commander

The PLNG Construction Manager or designate assumes this position upon receiving a call from the Scene Commander or other; as alternate the Manager, Health & Safety. Responsibilities include:

1. Responsible to take control measures during the emergency.
2. Calls the positions of the Crisis Support Group, informing to it and putting it on hold to be called. Orders the installation of the Emergencies Operations Center, when it is required by the incident's magnitude.
3. Advises the On Scene Commander.
4. Verifies the emergencies level and monitors the response activities that had taken place in the field.
5. Evaluates continuously the situation severity and the potentiality of its progress through regular updates. Ensures that the Internal Coordinator is informed of the emergency's state during the emergency and of the actions that had been taken.
6. Decides when to request external support, if the available resources in the zone are not enough.
7. Acts as immediate support to the On Scene Commander.
8. Prepares the documentation materials for the team and the emergency.
9. DOCUMENTS all the activities and ensure that the registers are maintained and chronologically organized.

D.3.2 PERU LNG On Scene Commander

The PLNG Senior Supervisor at the work site or designate assumes this position. Responsibilities include:

1. Provides the technical and specialized support to the Incident Commander and to the members of the Crisis Support Group.
2. Reports to the Incident Commander.
3. Monitors the technological, engineering, geological, environmental and safety activities that take place in the emergency scene.
4. In consult with the Incident Commander, will identify the safety zones, according to the incident's magnitude.
5. Will register the sequence of the events developed during the contingency.
6. Responsible for the conservation (files) of the activities registers during a contingency, and of all the documentation related with the plan.

D.3.3 PERU LNG Internal Support

The PLNG Construction Project Manager or designate assumes this position. As alternate will be the PLNG General Manager. Responsible for obtaining corporate resources from

departments such as Engineering, Legal, Human Resources and, serves as communications hub between the Incidents Commander, PLNG Management and Contractor Management. This position is for coordination and has no control over the resources used to respond.

D.3.4 PERU LNG Communication Coordinator

PLNG General Management or designate assumes this position. Responsibilities include:

- Provides support and organization to the internal communication in course.
- Makes contact with the governmental entities and verifies that the notifications required by law are done.
- Provides official information updated to the communication, Medias and press about the incident, as well as the established communication actions.
- Coordinates the communication with the public, the medias and with the governmental dependencies and verifies that the necessary notifications had been sent according to the corresponding terms and ends.

D.3.5 PERU LNG Administrator

PLNG Health and Safety Administrator Assistant or designate assumes this position. Responsibilities include:

- Assistant of the Incident Commander in the data collecting and reported registers by the Scene Commander. Moreover, is in charge of putting the response personnel names inside the structural chart of the Incident Command located inside the Incident Command Center.
- Support on call of the different positions inside the Incident Command Group.
- Provides to the Incident Commander the Contingency Plan and all the information that this person required inside the Incident Command Center.

D.3.6 PERU LNG Legal Support

PLNG Senior Legal Representative or designate assumes this position. Responsibilities include:

- Coordinates the activities of legal support.
- Identifies and provides to the Administrator, evaluations referred to subjects of legal expositions, responsibility implication in the emergency and supports in the review of the communications with the Medias.

D.3.7 PERU LNG Logistic support

PLNG Senior Construction Personnel are most qualified to assume this position, however the individual needs to be someone that can communicate with outside agencies to provide vital support as requested by the incident commander.

1. Coordinates support activities in aerial transport (helicopters), support to heavy machinery or equipment and transport of resources (equipments, materials and personnel) to the emergency place.
2. Negotiates obtaining funds for the response activities to incidents.

D.3.8 PERU LNG Health and Safety

The Manager of Health and Safety or designate assumes this position. Responsibilities include:

- Will recommend the Incident Commander the control actions to be taken in the emergency place, ensuring that these make a priority overall the personnel health and safety.
- In coordination with the Safety Coordinator on Scene, will evaluate and identify the existing risks in the emergency place, as well as will analyze and evaluate the actions or activities that took place identifying and valuing the risks.
- Will provide appropriate safety procedures or the best practices to ensure the emergency control.
- Will recommend the necessary equipments and resources to make easier the emergency control operations.

D.3.9 PERU LNG On Scene Safety coordinator

The Health and Safety Supervisor at the work site or designate assumes this position. Responsibilities include:

- As possible will go to the incident place.
- Will support the Scene Commander in the control actions of the emergency, making a priority overall the safety of the personnel involved in the incident.
- Will evaluate and determine the emergency level in coordination with the On Scene Commander and Incident Commander according to the information obtained from the Scene Commander or according to what is observed (if going to the incident place).

D.3.10 PERU LNG Security

PLNG Security Director or designate assumes this position. Responsibilities include:

- Will identify the zones or routes used by drug dealers or terrorists and will warn the Incident Commander about the possible risks.
- Will coordinate with the army forces (Army, Aerial Force and Navy) the external support that is required to make easier the rescue and search operations of the personnel involved with the project.
- Will request the local police support (closets to the incident) with the purpose of watching over and providing safety to the personnel involved with the project.

D.3.11 Incident Commander (Contractor's)

- Position in charge by the Contractor's Project Manager. As alternate is the contract Administrator. As second alternate will be assigned the PERU LNG functionary of highest level on the route.
- Will be responsible of implementing the Contingency Plan.
- Will take the control and will coordinate with the Operative Coordinator.
- Directs the integral response management from the Emergencies Operations Center.
- Communicates the Scene Commander about all the response activities that had been done.
- Determines whether he wants support resources and requires them to the Scene Commander.
- Verifies the emergency level or re-classifies it.

- Establishes the support of the Crisis Support Group and requires the necessary advisors and technical support to assist on the response.

D.3.12 Operative Coordinator (Contractor's)

- Position in charge of the Health and Safety responsible in the place or of some personnel on the route designated by the first one, properly trained to assume functions. This function can be assumed in first instance by the responsible of the involved vehicle.
- Will Implement the Command Position in the Place, when it is required by the incident's magnitude. In this place locates its position.
- Will lead the initial response actions in the place, summoning and using own resources and/or available external support it is required.
- Will evaluate and re-classify the emergency level.

D.3.13 Safety Coordinator (Contractor's)

- The position is assumed by a designated person by the Scene Commander.
- Located by preference in the scene.
- Verifies the amount of people involved in the scene.
- Verifies the attention provided to the crew of the involved vehicle and the zone's residents.
- If necessary, initiates the notifications and organizes the evacuation actions on the event zone and third parties in risk.
- Ensures that the groups of Road Block outs (transit control) order and execute the necessary dispositions to avoid risks, vehicle incidents or traffic.
- Evaluates the situation and scope of risks to the people's health or integrity in the affected area.

D.3.14 Logistic Coordinator (Contractor's)

- Position designated by the Incident Commander.
- Will have as main function the timely acquisition of equipment and supplies to attend an emergency.
- Responsible of providing or coordinating on time the sent of equipments, inputs, human resources and additional services that are necessary on scene.
- Supervises the custody and storage of the equipments and additional supplies reserved that keep arriving to the scene.
- Advises the Scene Commander in things related to obtain complementary external resources required for the response.
- Coordinates with the local services the external support that is required for the control of Emergencies Level II and III.

D.3.15 Personnel not Assigned in the Contingency Plan

- Every Supervisor assigned on the route could assume one or many of the responsibilities from this organization chart, in order to be stand out to the scene by its closest location and accessibility. In these cases will assume a leader role in the positions is designated.

- The Supervisors could rely on personnel and technicians of the operations to do the entrusted functions.
- Will be responsible of the personnel safety under its charge during the emergency.
- Will prepare the Inform of its participation in the emergency within 24 hours of the occurrence of the emergency.

D.4 Emergency Response (ER)

The ER´s constitute documents of continuous improve that describe the specific control actions that the drivers, crew, personnel of the Communication Center and response personnel must adopt as priority, using the available resources, to mitigate and control an emergency occurred with the trucks on route.

The develop of the ER´s is based mainly in the risks with more probability of occurrence and in those with low probability, but could cause big loss of equipments, properties, health, affectation to the operations and to the company's image.

The ER´s once developed written, as preference with participation of the involved people, advisors and/or experts on the subject, must be included in the corresponding chapter of the Plan and spread through a training activity.

Finally, insofar that emergencies are attended, mocks are done (with the respective analysis) or periodic reviews of this document are executed, the ER's must also be improved or updated (it will be indicated the version number of the document) in function to the new dangers and risks identified on the route.

D.4.1 Attention and Response Priorities during an Incident

Every time that the complexity of the zone, sudden climate changes, the geo-dynamic of the trip and the exposition to third parties is constant in all the blocks of the route, the expectance of the scenarios to predict, is very changeable.

Any is the case or resulting emergency the attention priorities are based on following the concepts:

- **PRIORITY TO PEOPLE LIFE**

  Over any active, material, equipment of the company or third parties.

- **PRIORITY TO RESPECT THE ENVIRONMENT AND COMMUNITIES**
- **PRIORITY IN THE NOTIFICATIONS**

  All emergency must be notified immediately, and could support in extreme cases a maximum flexibility of 30 minutes, in cases of prioritizing the medical attention to injured people.

  Ex. Apply triage or first aids to the injured, before mobilizing to ensure a better satellite sign.

- **PRIORITY IN THE PROJECT IMAGE**

  The support of PERU LNG during emergencies on the route must be a priority over any other ordinary, common and operative objective of the involved truck; only when it fulfills the safety conditions described in Attachment E PRCE 05.

Ex. Support the attention of vehicle incidents to third parties instead of reaching the objectives of the day, of the personnel inside the truck.

D.4.2 Response Procedures to Emergencies – RPE

The ER´s developed and detailed in **Attachment E** are:

	DESCRIPTION OF THE RPE	APPENDIX
D4.2.1	Fire in the vehicle	RPE 01
D4.2.2	Pedestrian run over	RPE 02
D4.2.3	Serious sickness of the driver	RPE 03
D4.2.3.a	Serious sickness of the crew	RPE 04
D4.2.4	Assault/ criminal ambush	RPE 05
D4.2.5	Roll over / Mislead of the vehicle	RPE 06
D4.2.6	Vehicle damage for rock fall	RPE 07
D4.2.7	Cattle run over / domestic animal	RPE 08
D4.2.8	Blocked roads involving PERU LNG	RPE 09
D4.2.9	Blocked Roads NOT involving PERU LNG	RPE 10
D4.2.10	Route interruption by earthquake	RPE 11
D4.2.11	Route interruption landslides	RPE 12
D4.2.12	Route interruption by Snow / Frost	RPE 13

D.4.3 Emergency Reponses in Special cases – RPEC

For non-classifies situations and scenarios as emergencies but due to changes in the climate severity, inadequate maneuvers, exposition to third parties and others circumstantial conditions can derivate in them; it has been established Procedures for Special cases EREC, more representative of the route.

The EREC must have the same guidelines that the ER's in format, redaction, implementation, diffusion and revision.

The EREC developed and detailed in **Attachment E** are:

	DESCRIPCTION of the RPE	APPENDIX
D4.3.1	Electrical Storm	RPEC 01
D4.3.2	Heavy Fog	RPEC 02
D4.3.3	Prolonged police detention	RPEC 03
D4.3.4	Pass or ford of the water course	RPEC 04
D4.3.5	Social support in case of incidents with third parties	RPEC 05
D4.3.6	Altitude Sickness	RPEC 06
D4.3.7	Mechanical failures that immobilize the vehicle	RPEC 07

E LIST OF RESOURCES AND AUTHORITIES ON THE ROUTE

E.1 Introduction

This chapter presents a list of Authorities, related to the route the light vehicles transit, emergency response, public health and generated environmental impact. It is detailed their main functions, organization, capacities and contact telephones.

In the **Attachment F** is detailed the organization chart, functions and operative structure of the main support organisms on route. This information has the purpose to orientate the respond person (personnel of PERU LNG or Contractor's because of its closest position to the incident scene can goes and provides support) to know the internal organization of the main support institutions with which the operations of light vehicles of PERU LNG will count in case of emergencies on the route Lima – Pisco – Ayacucho.

TYPE	ORGANISM / INSTITUTION	DETAIL OF THE INFORMATION
Resources	NATIONAL POLICE OF PERU – PNP	Gral. Organization
	GENERAL BODY OF VOLUNTARY FIREFIGHTERS OF PERU – CGBVP	Gral. Organization
	HEALTH MINISTRY – MINSA	Gral. Organization
	SUMMARY LIST OF RESOURCES ON THE ROUTE	Por kilómetro (en Tabla dinámica)
Authorities	MUNICIPALITIES, LOCAL GOVERNMENTS AND OTHER RELATED ORGANISMS	Lista general
	SUPERVISOR ORGANISM OF ENERGY INVESMENT – OSINERG	Gral. Organization
	SUMMARY OF AUTHORITIES ON ROUTE	By kilometer (in dynamic Table)

The information of this chapter is summarized in the three types of lists that gathered the most important information of contacts, telephone numbers and location by distances in kilometers.

Attachment G, are detailed the telephonic contacts of the institutions of first response on the route, such as police departments, hospitals and firefighters stations.

Attachment H is detailed the telephone contacts of the main authorities on route, such as Civil Defense and municipalities.

Attachment I is detailed the location by kilometer, of the support resources existing on route such as gas stations, tires vulcanizers, workshops of vehicle mechanic, hotels, telephones and others.

F RISK ANALYSYS

F.1 Introduction

This chapter has been extracted from the document “Risk Analysis of the route Lima – Pisco – Ayacucho”, Developed to determine the vulnerability of the transport operations with light vehicles.

The criterions of the risk matrix design used for the Risk Analysis are defined using the William T. Fine formula, it means pondering two factors: probability and severity. That is why the following formula is used:

Risk = Probability x Severity

F.2 Matrix Generated for the Risk Analysis

The matrix that will be used for the Risk Analysis on route is the result of uniting the occurrence probabilities by the severity levels. That way it results the following chart:

Severity Level	Probability of Occurrence			
	Frequent	Occasional	Remote	Unlikely
Catastrophic	Extreme Risk (9)	Extreme Risk (8)	High Risk (7)	* High Risk (6)
Critical	Extreme Risk (8)	High Risk (7)	Medium Risk (5)	Medium Risk (5)
Moderate	High Risk (7)	Medium Risk (5)	Medium Risk (4)	Low Risk (3)
Minor	Medium Risk (4)	Low Risk (3)	Low Risk (2)	Low Risk (1)

Notes:

* These high risks may be acceptable if the design, operations and management controls are consistent with industry practices, and there is no cost-effective option to reduce the risk.

If a risk falls between two or more categories, the selected risk ranking should reflect business sensitivity/priority and industry practice.

Numbers in brackets provide a method of rating risk on a 1-9 scale in order to prioritize mitigating activities/measures.

F.3 Probability Levels

The criterions of each level are detailed in the following chart:

Ocurrence Probability
Frequent It is produced repeatly during the development and life cycle of the project, more than once per month.
Occasional It is produced repeatly during the development and life cycle of the project, once between 1-12 months.
Remote It is produced repeatly during the development and life cycle of the project, once between 1-5 years.
Unlikely It is not expected to occur.

F.4 Severity Degrees

Severity Degrees
Catastrophic Injury, fault and Total Permanent inability - TPI -(death – Driver and crew) Loss of equipment, materials (> US $ 100,000) Total damage of the vehicle (> 70%) Damage to third parties (> US $ 100,000) (Fatal injury or injuries with TPI to pedestrians, animals, motor vehicles – mototaxis, ticos, combis, buses, trucks, tractors – non-motor vehicle – tricycle, carts and bicycles)
Critical Physical injuries with permanent partial inability – PPI (driver and crew) Loss of equipments, materials (US $ 30,000 – 100,000) Partial damage of the vehicle (50% - 70%) Damage to third parties (US $ 30,000 - 100,000) (Injuries with PPI to pedestrians, animals, motor vehicles – mototaxis, ticos, combis, buses, trucks, tractors – non-motor vehicles – tricycle, carts, bicycles)
Moderate Mild physical injuries with temporary total inability – TTI (driver and crew) Loss of equipments, materials (US $ 10,000 – 30,000) Partial damage of the vehicle (20% - 50%) Damage to third parties (US $ 10,000 - 30,000) (Injuries with TTI to pedestrians, animals, motor vehicles – mototaxis, ticos, combis, buses, trucks, tractors – non-motor vehicles – tricycle, carts, bicycles)
Minor Mild physical injuries and/or First Aids (driver and crew) Loss of equipments, materials (< US $10,000) Partial damage of the vehicle (20%) Damage to third parties (< US 10,000) (Mild injuries and/or first aids to pedestrians, animals, motor vehicles – mototaxis, ticos, combis, buses, trucks, tractors – non-motor vehicles – tricycle, carts, bicycles)

G TRAINING PROGRAM

G.1 Introduction

The objectives and scopes detailed in this Contingency Plan only can be fulfill only if that all the involved people had passed by some or many training activities that ensure fulfilling with the purpose of this document.

G.1.1 Program scopes

This chapter is developed to attend the training needs of the PERU LNG personnel and contractors.

G.1.2 Objectives

Define the type of training activities necessaries for each one in the Contingency Plan for Light vehicles. Each activity will define the list of topics, duration, objective public, technical specifications (optional), frequencies, evaluation type and re-training.

G.1.3 Methodology and Certification

The method to be used during the trainings must be interactive, which ensures the constant participation between the instructor and the participants. The feedback is permanent.

The courses will consist in talks with graphics, video projections, discussion of practical exercises and applied simulations. The 100% of attendance to the courses and the approval of the theoretical-practical evaluations will deserve the presentation of attendance certificates to each participant.

G.1.4 Courses List

Each one of the described courses must have a purpose, performance and instruction objectives. This way, the instruction program quality will be evaluated, as well as the learning reached by the participants (training objective).

Every course of this program has technical specifications, the same that are detailed in the **Attachment M.**

- Induction course of the Contingency Plan.
- Course about Emergencies Organization (procedures)
- Course about use of portable extinguishers
- Course of fight against fire
- Course of basic First Aids
- Course of advanced First Aids (optional)
- Course of rescue with ropes – Level I (optional)
- Course of Incident Command
- Course about defensive driving

Some OPTIONAL courses could be implemented once the plant site is finished.

G.2 Annual training program

To have the current Plan validity it is necessary to fulfill with the following annual program of training:

The main objective of the instruction program is to prepare all the personnel that is part of the light vehicles operations, on the route Lima – Pisco – Ayacucho.

For them will be necessary to develop a training program in three levels:

- At business level:

  Inside which it must be considered several segments:

  - Lima functionaries FE E = company
  - Chiefs and Plant functionaries JE
  - Plant Brigades BE
  - Vigilance personnel VE

- At contractor level:

  Inside which it must be considered several segments:

  - Drivers and crew CC C = Contractor
  - Supervisors and technicians SC
  - Functionaries and managers FC

- At local authorities level:

  Inside which it must be considered several segments:

  - Authorities and leaders AL L = Local

As general summary of the activities it will be presented an annual time schedule joined as **Attachment L**.

G.3 Annual Program of drills

Each year it must be done an unexpected drill with real mobilization of equipments and resources, according with a simulation planning in real time, at any part of the route.

The drill must be done according to the time scheduled and detailed in the joined **Attachment N**, the same one that fulfills the following frequency.

EMERGENCIES LEVEL II	:	three each year (Two programmed + One unexpected)
EMERGENCIES LEVEL III	:	one each year (the first years programmed, the following years unexpected).

ANEXO B

ATTACHMENT B

DEFINITIONS

1. **Vehicle Incident:** All non-desired event generated by basic causes (Acts, unsafe conditions and/or natural phenomenon) that generate damage to the transport operations (damages to the vehicle, injuries to the people, active losses, social problems, etc.).

2. **Work Incident:** The one that happens to the Personnel in the execution of an employer's order. It is considered as Work Incident every violent or sudden event in the fulfillment of the functions that came of from and during the course of the work that causes damage and/or organic and functional injury to the Personnel, due to external causes or to the effort done by him and that originates temporary or permanent decrease in the work capacity or total disability or that causes his decease.

   It is considered Work Incident the one that happens to the Personnel in the execution of the employer's order even outside the place and work hours, as well as the one that happens before, during and in the work interruptions, if the Personnel Member is, a cause of reasons of work duties, satisfying basic physiologic needs in the work or in the EA premises.

   It is also considered as Work Incident, the one that happens by actions of third parties or of other member of the Personnel during work hours.

   It is also considered as Work Incident, the one that happens when the Personnel member is going to the work center or comes back from it, in transportation provided by the titular for this purpose.

3. **Environment:** Is the group of biotic and abiotic elements that interact in a determined space and time.

4. **Risk Analysis:** The study to evaluate the potential dangers and its possible consequences in an existing facility or in a project, with the purpose of establishing measures of prevention and protection.

5. **Incident:** All non-desired situation (natural or induced by man's hand) that can potentially generate negative consequences in the transport operations (damages, injuries, losses, social problems, etc.).

6. **Threat or danger:** All situation, phenomenon or condition that has the potential of causing damage and is inherent to the people, equipment, operations and environment of a system.

7. **Pollution**: Action that results of the introduction of pollutants to the environment.

8. **Probability:** Is the mayor or minor tendency to the occurrence of an emergency during the development of the transport operations on the route.

9. **Risk:** Possibility and level of probability that it occurs and emergency. It is measured based on the function to the Severity of the Threat or Danger an to the probability that it occurs.

10. **Exposure Meter:** Instrument to measure the content of Hydrocarbon gases in the environment.

11. **Spill:** Incidental pouring of fuel, toxic and/or dangerous substances in volumes, flows or concentrations that put in risk the health and environment.

12. **Emergency:** Partial or total disruption of the organization that can put in danger the continuity of the operations and that must require for its management, resources and different and/or superior procedures to the normally used by the facility, as well as the temporary modification (partial or total) of its organization to be able to attend it.

"The emergency situations use to be caused by events of accidental or non-accidental origin, and they could be of technical character as: fires, explosions, roll over, product leak, pollution, intoxications, damages to the equipments or goods, etc. They can also have as origin natural events such as: incident, mechanical problems, earthquakes, floods by rains. Finally, considering the events of social origin such as attacks, vandalism, fires, sabotages, etc.".

An Emergency presents any of the following characteristics:

- Interrupts or alters the route of the transport unit(s).
- Causes fatality or hospitalization of the transporters, habitants of cities or communities of the route.
- A spill, product leak or any other event that causes a risk and/or exceeds the standards of Health, Safety and Pollution of the valid National Legislation or of the transport operations of **PERU LNG**
- Evacuation Need by danger of explosion or pollution.
- Requires take of decisions of the Management.
- Attracts the press attention and general public.
- Assault, hostages and/or attacks with the transport units.

13. **Impact phase:** Period of time during which acts the disaster that origins the emergency.

14. **Environmental Impact:** Is the effect that the man's actions or natures cause in the natural and social environment. Can be positive or negative.

15. **Control:** Action of eliminating or limiting the development of a disaster, to avoid or minimize its consequences.

16. **Incident:** An undesirable event or occurrence that results in or has the potential to result in harm to people, environment, property/assets, or company reputation..

17. **Mitigation:** Actions developed during or after a disaster control that tends to counteract its critical effects and ensure the survival of the system, in the meanwhile it can be done the rehabilitation activities.

18. **Evacuation:** Planned action through the one each threaten person develop pre-established procedures to be save **by its own** through the movement to places of less risk..

19. **Rescue:** Actions throughout trained groups (external or the ones that belong to the company) remove the people that could not get out during the evacuation process).

20. **Emergency Organization Chart:** Flow of functions and responsibilities in which is based the Emergency Organization of a Company, to respond in a immediate and efficient way to a risk emergency. It is composed basically by the Incident Commander and support personnel.

21. **Incident Commander:** Is the maximum authority if the Emergency Organization Chart of **PERU LNG**. Manages and develops the strategy (Level II and III)

22. **Emergency Brigade:** For effect of the present Plan, this brigade is constituted by a group of personnel properly trained for the operative control o fan emergency outside the plant. This group will be lead by the Chief of the Brigade.

23. **Control Center:** Is a physical environment assisted 24 hours by prepared personnel with minor equipment and telephones, as well as with communication systems used by the company.

24. **Emergency Room:** It will work in the Conference Room of the Management (Administrative Offices). It will be properly equipped with logistic medias and of necessary communications to allow the operation of the Incident Command (minimum 2 telephones, copy of the Plan and Organization of **PERU LNG**, copy of other developed plans, general inventory of the plant, Map of the route, office's supplies).

25. **Contingency Plan:** That one that details the actions to carry out in case of emergencies, as a result of spills, leaks, fires, natural disasters, etc. It must include the following information:

    1. The respective organization and the procedure to control the emergency.
    2. Procedure to be follow to report the incident and establish Communication between the personnel in the place where the incident occurred, the executive personnel of the facility, OSINERGMIN, the DGH and other entities, as required.
    3. Procedure for the training of the personnel of the facility in Emergency and response techniques.
    4. General description of the operations area.
    5. List of the equipment's type to be used to face the emergencies.
    6. List of the contractor or persons that are part of the response organization, including medical support, other services and logistic.

26. **Document revision:** Process by which it is reviewed the partial document or totally, a cause of an event related to the scopes of it, such as the analysis of a real emergency, the results of a mock, the unexpected revision of a data or procedure by any member of the organization.

27. **INCIDENTS Examples:**

    - Fires.
    - Explosions.
    - Earthquakes.
    - Hydrocarbon's spills.
    - SIPI of chemical products.
    - Aerial disasters.
    - River disasters.
    - Earth disasters.
    - Epidemics/Massive poisonings.
    - Attacks/Sabotages.
    - Terrorist raids.
    - Situations of civil commotion, riots.

28. **First Aids:** Cares and immediate actions that must be provided to casualty, damaged or sick person, until receiving specialized medical attention in case it is required.

29. **Document Updating**: Process by which it is totally reviewed the document as result of a legal demand or because it has not been revisions in a determined period of time (minimum 6 months, maximum 12 months).

30. **Hazardous Materials**: Any substance that at the time it is released ills people, properties and the environment.

ATTACHMENT D

LIST OF SAFETY EQUIPMENTS FOR LIGHT TRUCKS

MINIMUM OBLIGATORY EQUIPMENT

01	SPARE TIRE
01	JACK AND WRENCH
01	AIR COMPRESSOR OF 12 VOLTS
01	TIRE-PRESSURE GAGE
01	PORTABLE PIRATE LIGHT
01	COVER OF HOPPER PICK UP DOBLE CABIN
01	EMERGENCY LIGHT FOR HIGHWAYS (REFLECTOR)
01	TOOL BOX (flat screwdriver, star screwdriver, tongs, wrench, cutter, hummer, magnifying glass, mirror).
01	SET OF CABLES FOR ELECTRICITY (JUMP)
01	EXTINGUISHER PQS ABC OF 5 LBS. (Nominal weight); certification UL
01	LIST OF EMERGENCY TELEPHONES
02	SAFETY TRIANGLES
02	PAIR OF INDUSTRIAL GLOVES
01	FLASHLIGHT OF 3 BATTERIES
09	SPARE BATTERY
02	VEST WITH REFLECTIVE STRIPS
02	WOODEN WEDGES OF 15 CM HEIGHT AND 20 CM WIDTH
01	SLING / TOWING STRIP (minimum 6 MTS)
01	REFLECTIVE POSTERS OF "NOTIFY THE POLICE"
02	PAPER MARKERS
01	SMALL ROLL OF ADHESIVE TAPE

OPTIONAL EQUIPMENT ACCORDING TO SPECIAL CONDITIONS

01	SPARE TIRE (second)
01	SHOVEL FOR MUDD OR ALL TERRAIN
01	PICK FOR MUDD OR ALL TERRAIN
01	GPS
01	CERTIFIED METALLIC CONTAINER WITH FUEL
01	SURVIVAL BACK PACK (Food for 24 hours, thermic blanket, matches, candles)
01	ELECTRIC HOSTING ENGINE WITH 30MTS OF STEEL CABLE WITH HOOKS
01	DIGITAL PHOTOGRAPHIC CAMERA
01	HAND AXE
01	PLASTIC CONTAINER WITH 5 GALLONS OF WATER

PERU LNG

PORTABLE FIRST AID KIT OF THE VEHICLES OF LIGHT TRANSPORT AND SUPPORT TRUCKS

The first aid kit must be a plastic suitcase (back pack type) of a strong color, signposted with pockets with zipper.

05	Sterile lint of 7.5 x 7.5 cm. to clean and cover the injuries or stop bleedings.
06	Compress (portion of a square, sterile lint, big enough (38 to 40cm) so it can be extended beyond the injury's edge)
12	Dressings of 13 x 8 Cm.
04	Elastic Bandages of 2 inches.
01	Elastic Bandages of 3 inches.
03	Triangular bandages of 40" x 40" x 56".
01	Adhesive bandages (Such as band aids), are useful to cover small injuries.
02	Stick for put down the tongue (To immobilize fractures or luxations of the fingers).
01	Plaster roll of 3"
01	Big package of cotton
01	Plastic flask with alcohol (100cc.).
01	Plastic flash with Savlón (100cc.).
10	Pair of latex gloves N° 7 and 7.1/2.
01	Pocket flashlight with concentrated ray of light type pen.
01	Special scissor to cur clothes (Paramedic scissor)
01	KED (optional)
01	Cervical surgical collar (optional)
01	Pack of pneumatic ferrules (optional)
01	Metallic layette (optional)
01	Portable equipment of oxygen (optional)

PERU LNG

IMMOVILIZATION EQUIPMENT

(RECOMMENDATION TO INSTALL IN THE PLANT)

04 Spinal board of polyethylene with foam inside with capacity of 250lbs., and must have a length of 72", width of 18" and width of 17 lb.

04 Pack of strips spider type with ten fix points to allow a complete immobilization in the spinal board (it is sold together with the board).

04 Locking device (2 pieces) of lateral standard heads compatible with the long spinal immobilization, the same that must include the two lateral blocks and a pair of strips for the head.

04 Pack of wooden quilted ferrules for immobilization of fractures in leg, arm, forearm and foot.

04 Cervical surgical collar for adult adjustable to all adult sizes.

04 Common wool blanket and two common twin sheets

FOR LOKKING AFTER THE AERIAL WAY

02 Portable and rechargeable oxygen equipment, with aluminum cylinder type "D", a pressure regulator 0-25 LPM, a nasal cannula, a face mask with reservoir and a case for transport it.

FOR BURNINGS

01 "Kit" for burnings Water Gel or similar, composed by the following compresses:

One	of 12 x 16"
One	of 8 x 18"
One	of 4 x 16

Health Ministry – MINSA (Hospitals, Centers and first aid posts)

General Law of Health

Law N° 26842 of the 20 July of 1997

Function and responsibility

The Health Authority is organized and exerts at a central, non-concentrated and decentralized level. It is exerted by the boards of the Executive Power and the decentralized boards of the government, according to the attributions that their respective laws of organization and functions grant them.

It is understood that the health authority nationwide is the specialized board of the Executive Power that has under its charge the direction and management of the National Policy of Health and acts as maximum authority that rules in health.

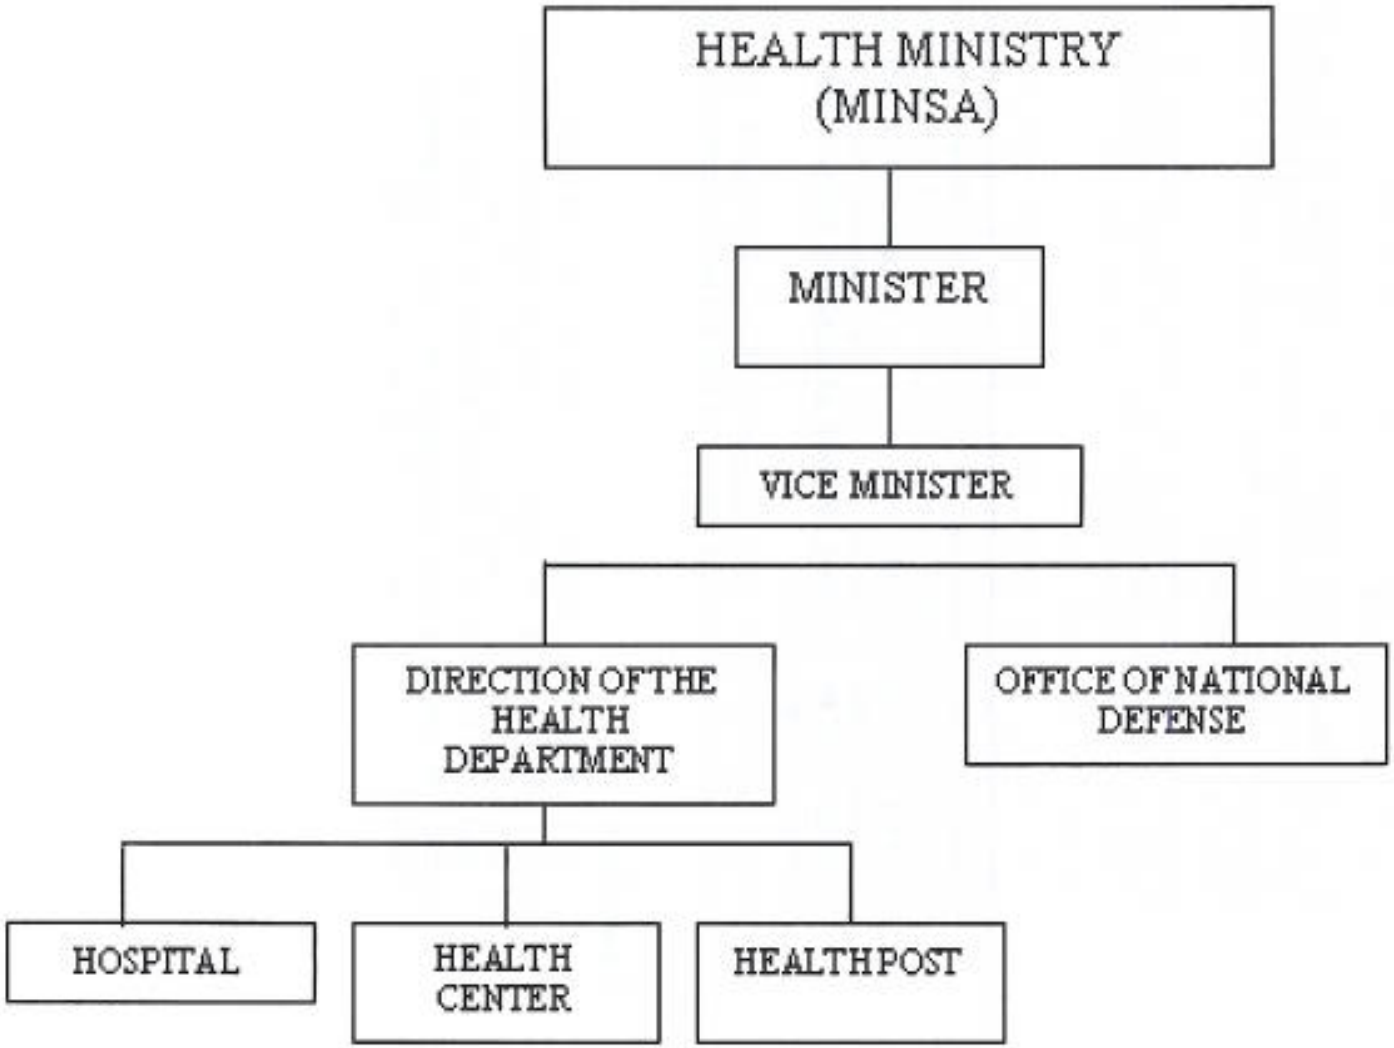

In application and fulfillments of the health rules that enact the Health Authority nationwide, the public entities that by their organization laws and functions, organic laws or special laws are able to control sanitary and environmentally aspects.

In the use of the attributions that grant the present Law, the organic laws, organization laws and functions, other special laws and its regulations, the health authority is entitle to prepare actions of orientation and education, practice inspections in any good, furniture or building, take samples and proceed to the corresponding tests, collect information and do all the actions that consider relevant for the fulfillments of its functions, as well as applying safety measures and sanctions if it is the case.

The health authority could request of the public force to ensure the fulfillment of the orders and measures that the health protections takes.

Organization

The Health Ministry (MINSA) counts with an office of National Defense, which has the work of action in cases of disasters, as well as in emergencies of great magnitude nationwide. Both as coordinator entity between the hospitals of the Ministry nationwide as well as an action in center with the necessary professional to control the emergency. This office as authority can act ex- office in case on an event.

HEALTH MINISTRY
(MINSA)
MINISTER
VICE MINISTER
DIRECTION OF THE
HEALTH
DEPARTMENT
OFFICE OF NATIONAL
DEFENSE
HOSPITAL
HEALTH
CENTER
HEALTH POST

a) Level of MINSA hospitals

a.1) Level I

- Health posts (Managed by nurses and/or technical personnel)

a.2) Level II

- Health Centers (count with doctors, nurses, obstetrics)
- Type I (without space for internment)
- Type II (with availability of internment)

Municipalities, local governments and other institutions

MUNICIPAL GVERNEMNTS

The local governments are basic entities of the territorial organization of the State and immediate channels of local participation in public matters that institutionalize and manage with autonomy the interests of the corresponding communities, being essential elements of the local governments, the territory, the population and the organization.

The local governments have the purpose of representing the neighborhood; promote the adequate provision of the public local services and safety of the community, as well as the integral, harmonic and sustainable development of its district.

The municipalities are provincial or district. They are ruled by the special regime of the frontier municipalities and of the Metropolitan Municipality of Lima. The municipalities of populated centers are created according to law.

The municipalities are classified according to its jurisdiction and special regime in the followings:

In function to its jurisdiction:

1. The provincial municipality, over the territory of the respective province and of the enclosure.
2. The district municipality, over the district's territory.
3. The municipality of the populated center whose jurisdiction determines the respective provincial board by proposal of the district board.

The following are rules by the special regime:

1. Metropolitan of Lima, ruled by the special regime that is established in the present law.
2. Frontiers, which function in the capitals of provinces and districts located in the frontier zone.

The provincial and district municipalities are boards of the local government. The organic structure of the municipalities is composed by the municipal town council and the mayoralty.

The municipal, provincial and district town council is conformed by the major and the number of regents that establishes the National Jury of Elections, according to the Law of Municipal Elections.

The municipal town councils of the populated centers are composed by

a major and 5 (five) regents.

The municipal town council exerts normative and inspection functions.

The mayoralty is the executive board of the local government. The major is the legal representative of the municipality and its maximum administrative authority.

REGIONAL GOVERNMENTS

The Regional Governments come from the popular will. They are corporate bodies of public right, with politic, economic and administrative autonomy in matters of their competence, constituting a budget list for its economic and financial administration.

The Regional Governments have jurisdiction in the field of its respective territorial districts according to Law.

The Regional Governments have as essential purpose to promote the integral and sustainable regional development, promoting the public and private investment and the employment and guarantee the full exercise of the rights and the equity of opportunities for their habitants according with the national, regional and local plans and programs of development.

The mission of the Regional Governments is to organize and conduct the regional public management according to exclusive competences, shared and delegated, in the in the framework of the national and sector policies to contribute to the integral and sustainable development of the region.

The Regional Governments have the following basic organic structure:

THE REGIONAL BOARD is the normative and inspector body of the Regional Government. It is integrated by the Regional President, the Regional Vice President and the Advisors of the provinces or each region, with a minimum of 7 and a maximum of 25, the same that are elected by direct suffrage for a period of 4 years. The term of office is inalienable but revocable according to Law.

THE REGIONAL PRESIDENCE is the body of the executive Regional Government. The President is elected together with a Vice president for a period of 4 years. The term of office is inalienable but revocable according to Law.

The Executive Body of the Regional Government is organized in the General Management. It is complemented with the bodies in line, support, advising and control that establishes the corresponding regulations according to what determines every Regional Government and to the budget limits assigned for its current expense.

Organism Supervisor of Investment in Energy – OSINERG

OSINERG is ruled by the Law Nº 26734.

It is created the Organism Supervisor of the Investment in Energy (OSINERG) as inspector body of the activities that the companies develop in the sub-sectors of electricity and hydrocarbons, being a an integrant part of the Supervisor System of the Investment in Energy composed by the committee of electric tariffs , the Institute of Defense of the Competence and Intellectual Property and the Organism Supervisor of the Investment in Energy. It has corporate body of internal public right and has functional, technical, administrative, economic and financial autonomy, belongs to the Ministry of Energy and Mines.

The mission of OSINERG is to supervise, nationwide, the fulfillment of the legal and technical orders related with the activities of the sub-sectors of electricity and hydrocarbons, as well as the fulfillment of the legal and technical rules referred to the conservation and protection of the environment in the development of these activities.

OSINERG has a legal address and head office in the city of Lima and can establishes dependencies in any place of the national territory.

Function and responsibility

Watch for the fulfillment of the regulation that rules the quality and efficiency of the service provided to the user.

Inspection the fulfillment of the duties contracted by the dealers in the contracts of electric awarding and other established by law.

Inspection that the activities of the sub-sectors of electricity and hydrocarbon are developed according to the legal orders and current technical norms.

Inspection the fulfillment of the technical and legal orders related with the protection and conservation of the environment in the activities developed in the sub-sectors of electricity and hydrocarbons.

Organization

Directive Committee

It is composed by five members:

- 2 representatives of the Ministry of Energy and Mines
- 2 representatives of the President of the Council
- 1 representative of the Ministry of Economy and Finance

Management

Functionary designated by the Presidency.

Beside, it will be managements in Lima, the same that will depend of the General management and will be:

1 Electricity Management

1 Hydrocarbons Management

ANEXO J

Safe Driver's Code

Plan your Drive, Drive your Plan

Key behaviors of all drivers of vehicles:

- **Maximum speed - 100 km/hour unless road signals, road conditions, and/or weather conditions dictate lower speeds.**
- **No driving under non-daylight conditions without prior authorization by manager.**
- **Cell phone use while driving is strictly prohibited.**
- **Maintain safe following distances (3 second rule) at all times.**
- **Rest at least 15 minutes after 2 hours of driving and 12 hours after 10 hours of driving.**
- **Observe all road signs. Construction signs may change frequently and traffic patterns may have been altered.**
- **ZERO TOLERANCE**

Additional behaviors:

- Comply with the laws and ordinances of the country in which the vehicle is being operated.
- The operating condition of a vehicle is the responsibility of the worker driving the vehicle. Unsafe conditions are to be repaired promptly.
- Windshield, door glasses, rear glasses and rear-view mirrors are to be properly maintained at all times.
- All glass is to be kept clean and free of stickers, etc., except for those required by law.
- Windshields that have breaks, cracks, or shattered spots that obscure vision are to be replaced immediately.
- Daily maintenance of the vehicle should include an operational and/or visual check of the brakes, lights, horn, tires, windshield wipers and washers, rear-view mirror, windows, and steering assembly.
- When parking vehicles, the driver is to take positive steps to ensure that the vehicle does not roll out of control while unattended.
- All vehicles will be positioned in such a manner that ensures the equipment's exhaust is not in contact with combustibles.
- Headlights must be on at all times while performing work for PLNG/COLP unless security concerns dictate otherwise.
- Use horn to warn, not to annoy.
- Respect passengers and all road users including pedestrians.
- Signal your intentions; allow the other driver time to react.
- Move only when doors are closed and locked and after everyone's seat belt is fastened.
- Before beginning any trip, you must be fit, alert and have the following documents in your vehicle:
    a) Your Driving License
    b) Insurance (SOAT)
    c) Registration
    d) Private Vehicle Insurance
    e) Safe Driver / Passenger Code
- Only approved access routes shall be used.
- Follow the law 100% when driving (neither PLNG nor the contractor will pay fines).
- Report all collisions and faults promptly and specify all details for effective investigation.
- It is not allowed to use the "hands free" device.

ANEXO K

PERU LNG

FIRE INSIDE THE VEHICLE

CLASSIFICATION	LEVEL´S DESCRIPTION
ATTENTION	Mild warm-up of the engine, breaks and/or radiator. Mild short circuit that generates a slight burnt smell. Both conditions are detected and corrected without affecting the normal working of the vehicle. It is done a subsequent communication of the incident.
LEVEL I	Small attempt of fire in the engine, electric system, break system of the vehicle. The attempt can be controlled throughout physical means, stopping the running, turning off the engine, applying water or using partially a portable extinguisher. The vehicle can, with a minor repair and using the available tools, set off until a workshop for a meticulous revision. It must be informed immediately.
LEVEL II	Fire declared in any part of the vehicle. The flames envelop more of the 10% of the vehicle and only can be managed with one or many portable extinguishers (sand or available water). The vehicle alter being turned off can set off, having to be towed to an authorized workshop. It is possible that the driver spend the night on the route. The notification to the control center is immediate. The communication to the external support (PNP and CBP) as well as to a safe towing means will be necessary. A slight injured person can result from the control efforts. It does not involved property of third parties.
LEVEL III	Fire out of control envelops totally the vehicle, without possibility of using properly any portable extinguisher. It is only possible to control the emergency with the presence of a firefighter's vehicle. The destruction of the vehicle is almost complete. It must be transfer in a tower platform type to an authorized workshop. It must de done the police expertise, notification to the insurance broker and towing company throughout the control center.

RUN OVER PEOPLE OR ANIMALS

CLASSIFICATION	LEVEL´S DESCRIPTION
ATTENTION	Sudden break in presence of a pedestrian, rub without consequences of a person or animal on the route. Bring forward and recognition of persons with bad intentions on the route that try to throw domestic animals to the vehicles tires.
LEVEL I	Slight bump to a pedestrian with the vehicle or vice versa that does not cause damage to the person. Run over of an animal without consequences. The vehicle does not present damages. The Incident does not cause injured people that can not be assisted with a portable first aid kit. . The persons or owners of animals does not want to go to the PNP, health center or authority on the route.
LEVEL II	Run over or bump to a pedestrian with the vehicle. Maximum two slight injured people or one serious. The victim falls and is hard for him/her to return. Has moderate injuries, bleeding injuries, possible damage of the limbs or spine, is not oriented and/or shows pain. The injured person must be transferred to a health center for its evaluation and subsequent recovery. In case of an animal, this can not be able to manage on its own without help, has injuries and bleeding. The emergency must be reported immediately to the Control Center and fulfill with the procedures of the PNP and insurance.
LEVEL III (and fatal)	Run over that creates visible fractures, unconsciousness, bleeding and bruises in several parts of the body. The injured person must receive specialized medical attention. It is also considered as level III an Incident that generates run over of several pedestrians, more than two slights (that must be checked) or more than 2 serious ones. In case of an animal's run over this does not recover and can stay under the vehicle. The vehicle ends with damage. The emergency must be immediately reported to the Control Center and fulfill with the **procedures of the PNP and insurance. It is necessary the presence of a PERU LNG functionary** at the hospital.

STRIKE/ HIGHWAY BLOCK OUT

CLASSIFICATIÓN	LEVEL'S DESCRIPTION
ATTENTION	Reception of non-official commentaries about discomfort of the community o certain sector of the surroundings that threaten with blocking the highway. Gathering of people complaining on the route, without obstruction.
LEVEL I	Pacific manifestations that obstruct the way for a period of time no longer to the 30 minutes. The complaints are not directed to **PERU LNG**. It is not necessary the presence of external support (PNP) to dispel or transit at slow speeds through the manifestation. The incident is reported at the arrival to a company's facility.
LEVEL II	Unusual, sudden and violent movement of people complaining on the route. It is generated a total block out of the transit for a period of time longer than two hours and shorter than 4 hours. It is observed aggression to any vehicle or company that try to cross the block out. It is necessary the presence of the PNP to ensure the integrity of the affected people. It is reported to the Control Center and it is considered to come back to a safer place.
LEVEL III (and fatal)	Indefinite national or regional strike, violent highways' block out with complaints directed to the company. Try of aggression to vehicles, personnel and contractors of **PERU LNG**. The presence of the PNP does not offer safety to the parked vehicles. Likely damage or moderate injury to the crew. The report to the Control Center in immediate. The retreat must be done as soon as possible.

ANEXO M

PERU LNG

Training Department

TRAINING ACTIVITY SPECIFICATION	ET CAP-001 A

TITLE:	TEACHING HOURS:
COURSE FIGHT AGAINST FIRE	8- 24 HOURS

TYPE:
TEORETHICAL - PRACTICAL

DIRECTED TO:
BRIGADE AGAINST FIRE

TRAINING OBJECTIVE:
At the end of the course, the participant will be able to:

- Describe the bases principles of the behavior of the fire and classification.
- Identify and use the several types of portable extinguishers that are in the company.
- Identify and use properly the hoses and states rooms against fires.
- Use properly the Self-contained Breathing Equipment (SCBE)
- Use properly the foam generating equipments.
- Know the more used techniques in the combat against incipient, structural and non-structural fires.
- Describe the basic safety procedures during the combat against fires.

PURPOSE:
Provide to the participants the knowledge and necessary techniques to combat and control properly attempts or fires, using portable extinguishers, fire hoses and foam generating.

PERFORMANCE OBJECTIVES:
In case of a fire, the participants, divided in work equipments of 5 persons, in a period of time no longer than 10 minutes and following the procedures taught in the course, will be able to:

- Select the properly extinguishing equipment.
- Operate properly the extinguishing equipment.
- Control or extinguish the attempt or fire.
- Generate foam.

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-006

TITLE:	TEACHING HOURS:
COURSE "RESCUE WITH ROPES I"	16 HOURS

TIPO:

TEORETHICAL (25%) AND PRACTICAL (75%)

25 PARTICIPANTS

DIRECTED TO:

RESCUE BRIGADE

TRAINING OBJECTIVE:

At the of the course, the participant will be able to:

- List all the procedures to evaluate the incident.
- Indicate in a list the actions to be done to carry out the rescue of a trapped person in a cliff.
- Identify and use the different rescue equipments.
- Identify and use the different types of ropes.
- Indicate the types of mobilization and transfer of victims in a risky scenario.

PURPOSE:

Provide to the participants the necessary techniques to find and rescue victims that are trapped in places of difficult access, with the use of ropes and rescue accessories for lifting and descending with safe procedures for the rescuer as for the victim.

PERFORMANCE OBJECTIVE:

In case of a trapped person in a cliff, the participants, divided in a in work teams of 4 and 5 persons, in a period of time no longer than 20 minutes and following the procedures taught course, will be able to:

- Evaluate and ensure the scene.
- Apply the more adequate rescue procedure.
- Mobilize and transfer the patient.

LIST OF TOPICS:

- Safety in the scene
- Use of harness

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-008

TITLO:	TEACHING HOURS:
COURSE ABOUT USE AND HANDLING OF EXTINGUISHERS	02 - 06 HORAS

TIPO:

THEORETICAL - PRACTICAL
(2 hrs.) (2-4 hrs.)

DIRECTED TO:

100 % OF THE PERSONNEL groups of maximum 18 participants

TRAINING OBJECTIVE :

At the end of the course the participant will be able to:

- Describe the Basic principles of fire behavior.
- Describe the types of fires.
- Identify and use diverse types of portable extinguishers that are in the company.
- Describe the basic safety procedures during the combat against fires.

PURPOSE:

Provide to the participants the knowledge to differentiate the different types of fires that can be generated, recognize the more adequate extinguisher for this type of fire and use it efficiently to eliminate the risk.

PERFORMANCE OBJECTIVE:

In case of a incipient fire situation, the participants divided in work groups of 2 members, in a period no longer than 2 minutes and following the procedures taught in the course will be able to:

- Select the adequate extinguisher equipment.
- Operate properly the selected extinguisher .
- Extinguish the incipient fire.

LIST OF TOPICS:

- Modern theory of combustion
- Types of extinguishers

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-009

TITLE:	TEACHING HOURS:
INDUCTION TO THE CONTINGENCY PLAN EMERGENCIES ORGANIZATION	02 HOURS

TYPE:

THEORETICAL

DIRECTED TO:

100% OF THE PERSONNEL

TRAINING OBJECTIVE:

At the end of the course the participant will be able to:

- Describe the components of the organization chart of company's emergencies.
- Describe the general and specific function of the emergencies plan.
- Describe the general procedures in case of Fire, Earthquake and Evacuation.
- Know which are the Response Procedures for specific Emergencies.

PURPOSE:

Provide to the participants the necessary instructions to recognize an emergency and activate the emergencies organization, fulfill with the notification procedures developing the functions, responsibilities and established procedures for cases of fire, earthquake, evacuation need and others pre-established.

PERFORMANCE OBJECTIVE:

In case of a situation the participants in groups of 10 to 12 members, in a period of time of 10 minutes, must activate the Emergency Organization of the company, fulfill with the notification ways, initiate the control activities and evacuate in a safe way the other members of the group, according to the lines indicated in the talk.

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-009

TITLE:	TEACHING HOURS:
EMERGENCIES ORGANIZATION	02-04 HOURS

TYPE:
THEORETICAL

DIRECTED TO:
100% OF THE PERSONNEL

TRAINING OBJECTIVE:

At the end of the course the participant will be able to:

- Describe the components of the emergencies organization chart of the company.
- Describe the general and specific functions of the emergencies plan.
- Describe the general procedures and notification ways.
- Know which the Response Procedures are for specific Emergencies.

PURPOSE:

Provide to the participants the necessary instruction to recognize an emergency and activate the emergencies organization, fulfill the notification procedures developing the functions, responsibilities and established procedures for cases of accident, fires, natural phenomenon, evacuation necessity and other pre-established.

PERFORMANCE OBJECTIVE:

In case of a situation the participants in groups of 2 to 4 members, in a period of time of 10 minutes, must activate the Emergency Organization of the company, fulfill with the notifications forms, initiate the control activities and execute in a safe way the guidelines indicated in this course.

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-010

TITLE :	TEACHING HOURS:
COURSE ABOUT FIRST AIDS	6-12 HOURS

TYPE:

GENERAL COURSE FOR THE PERSONEEL
15-18 PARTICIPANTS

DIRECTED TO:

100 % field, building, industry and commerce personnel.

TRAINING OBJECTIVE:

At the end of the course the participant will be able to:

- Find, identify and evaluate the injuries of a person using the principles of general description.
- Identify the signs and symptoms of respiratory obstruction and apply the measures of urgent respiratory assistance.
- Identify the signs and symptoms of cardiac failure and apply CPR.
- Identify the signs and symptoms of the injuries and bleeding applying the adequate measures.

PURPOSE:

Provide to the participants the knowledge and abilities to attend one or more injured persons, as consequence of an emergency, using the existing equipments in the facilities, as well as preparing the involved persons for a proper transfer.

PERFORMANCE OBJECTIVE:

In a request of help, the participants divided in work groups of 2 and 3 members, in a period of time no longer than 10 minutes and following the procedures taught in the course will be able to:

- Secure the scene and evaluate a patient.
- Stabilize the injured patient and with respiratory problems in the scene.
- Prepare the person for its transfer.

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-030

TITLE :	TEACHING HOURS:
COURSE "INCIDENT COMMAND"	12 - 24 HOURS

TYPE

THEORETICAL (10-20 hours) - ROOM SIMULATION (02-04 hours)
20 PARTICIPANTS

DIRECTED TO :

- Miner Companies (Managers, supervisors and functionaries)
- Petrochemical industries
- Companies that transport acids, GLP, fuels.
- Carriers of dangerous materials
- Aerial and maritime lines
- Responsible of elaborating plans and emergency and disaster procedures.

TRAINING OBJECTIVES:

- Know the Basic principles about necessary Leadership for the adequate direction of Institutions, Organizations and personnel in emergency situations.
- Establish the structure and characteristics of a Command Positions.
- Define the facilities and necessary equipment to establish a Command positions, as well as the control formats and incident management.
- Determine the expansion and contraction form of a Response Organization, according to the necessity and incident's magnitude.
- Establish the structure and scopes of an Action Plan that includes a time table of activities.
- Know the scopes and applications of a Command Position (CP), a Centre of Emergency Operations (CEO) and a Contingency Plan of the private activity.
- Understand the objectives that the Medias has, to be able to develop the press work and know the adequate way to generate truthful, timely information and technically adequate according to the type and magnitude of each emergency.

PERFORMANCE OBJECTIVES:

- Establish the initial structure of the command position under the charge of the Incident Command System (ICS) and the tactical priorities to be executed.

PERU LNG

Training Department

SPECIFICATION OF THE TRAINING ACTIVITY	ET CAP-004

TITLE:	TEACHING HOURS:
ADVANCED FIRST AIDS	32 - 40 HORAS

TYPE:
THEORETICAL - PRACTICAL

REQUIREMENT: Basic First Aids

DIRECTED TO:
BRIGADE OF FIRST AIDS / EXPLORATION PERSONNEL / PEOPLE IN CHARGE OF THE MEDICAL POST

TRAINING OBJECTIVE :
At the end of the course, the participant will be able to:

- Find, identify and evaluate injuries in a person using the principles of general description (revision)
- Identify the signs and symptoms of respiratory obstruction and apply the measures of urgent respiratory assistance (revision)
- Identify the signs and symptoms of cardiac failure and apply CPR in adults (revision)
- Know the triaje techniques STAR.
- Apply the protocols of primary and secondary evaluations.
- Know the interpretation of the Glasgow scale and the trauma scale.
- Identify the signs and symptoms of bleedings and apply the adequate measures to control them.
- Know the symptoms, signs and Basic attention for cases of Anaphylactic Shock, Stress heat, Diabetic Coma and ACV.
- Restore properly fluids by intravenous way.
- Identify the signs and symptoms of trauma in bones and apply the measures of urgent assistance.
- Identify the signs and symptoms of burns / electrocutes and apply the urgent initial treatment..
- Use the immobilization techniques and transfer of victims with and without stretchers.

Purpose :
Provide to the participants the knowledge and necessary abilities to attend properly, in the incident place, stabilize and prepare for its transfer , in a safe way to the place where it receives medical attention.

LIST OF EQUIPMENTS AVAILABLE IN THE COMMAND CENTER

FACILITIES

The facilities of the Command Center must allow carrying out its operations during a long period of time if the emergency conditions let it. Its location in the building must make easier or ensure the following:

- Entrance and movement of Functionaries, Chiefs, Visitors, even when the rest of the offices are not working.
- Access to a bathroom for the users.
- Secondary power source of automatic activation (power generator)
- Conditioned environment of automatic and manual regulation.
- Restricted access, security in the entrance door.

MINIMUM EQUIPMENT

The minimum equipments that this environment must maintain are based on providing the easiness so the functionaries of PERU LNG can administrate an emergency of proportions, coordinate resources in the way, request support to external institutions, do the coordination with the press and authorities, as well as a constant communication with the scene responsible. On this way, it will be necessary to count with:

- A fixed exclusive device central type (identifies the calls, speaker, memory, etc.). This line will NOT pass by the central.
- Two annexes of the telephonic central of PERU LNG
- A cell phone type RPM
- A Nextel cell phone (optional)
- Connection for three laptops or computers with restricted access (with code) to the company's server.
- One printer
- Connection to Internet for this computer.
- An acrylic board with markers of many colors.
- General and detailed maps of the route Lima – Pisco – Ayacucho (original and copies).
- Cable connection for a television.
- Copy of the Contingency Plan
- Copy of the risk analysis of the route Lima – Pisco – Ayacucho
- Office materials (Paper, pens, notebooks, flip charts, etc.)
