

Task Title/Description	Anticipated Completion Date
1. The company will conduct an energy audit of the new hospital within one year of its becoming fully operational. A full energy audit, benchmarked against industry averages, will be undertaken and used to identify opportunities for new practices, different equipment etc to increase energy performance.	3/31/2014
2. Certification of Life and Fire Safety System Design for the new hospital and clinic facility. 1) Provide certification by a qualified professional acceptable to IFC that the design and construction of life and fire safety systems for the entire facility complies with the Life and Fire Safety requirements of the WBG General EHS Guideline, that the design is fully responsive to one international life and fire safety code and the host country life safety code. 2) If the above assessment determines measures (e.g., corrective actions) are required in order for the Life and Fire Safety requirements of the WBG General EHS Guideline to be met, then the company must develop a time-bound plan to accomplish such items.	3/31/2012
