

The present representation of the proposed expansion 'IEFCL-Train2' has been developed by inserting the main components of an Ammonia and Urea Plant, Ammonia Storage tank, Urea warehouse and bulk loading, similar to those foreseen by the Project, on the free areas of the Complex selected for the new Plant installation.

**(IEFCL-Train2 is replica of IEFCL-Train1).**

Due to framing requirements, in this representation some components of IEFC-Train2 (DM Plant, Nitrogen Plant etc). are not included.

The location and volumetry of these components is detectable consulting the drawings in Appendix 1.1 of the present EIA report.
